Your healthcare facility reflects your institution's care — a setting that can foster wellness, empower staff, and instill pride in the community you serve. As the facility owner, manager, or clinical director, your decisions can adapt to future changes, balance need with resources, and be mindful beyond minimum standards. You have the potential to establish robust benchmarks, represent good stewardship, collaborate with diverse stakeholders, and to restore health – you have the power to be a hero.

This highlights **a collection of experiences** by other heroes who gathered resources, instigated actions, generated ideas, changed perceptions, and restored health.

Six attributes characterize the planning and design of healthcare settings that address both process and product, and once set in motion, a successful outcome is achievable. The following gallery showcases these attributes.

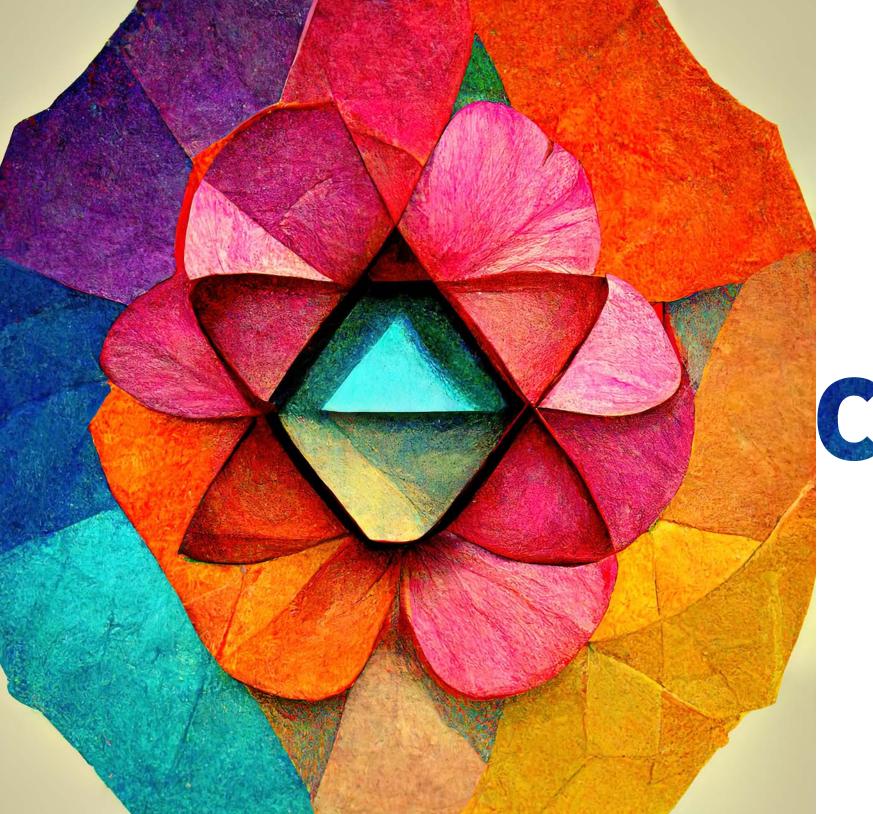

"I've had the distinct pleasure of working with HED over the course of the last several years to help build the footprint of the service line and it's flagship hospital the WVU Heart and Vascular Institute. This facility is second to none... and this is a testament to the excellent work of [the] entire team at HED."

Vinay Badhwar, MD | Executive Chair
 WVU Heart and Vascular Institute

collaborative

Collaboration can be defined narrowly or broadly. However you define your stakeholders, listening to diverse perspectives sets the stage for an interdisciplinary team capable of advancing healthcare.

Designers as patients
Open to the light
Simplified wayfinding

"Well-crafted healthcare spaces have a direct and measurable impact on patient health outcomes. Through elegant and beautifully-executed design solutions, we're helping doctors to be more effective, enabling patients to receive more advanced care, and ultimately, contributing to longer, healthier lives."

- Timothy Hurvitz AIA, LEED AP BD+C
Associate Principal. Sector Leader | California

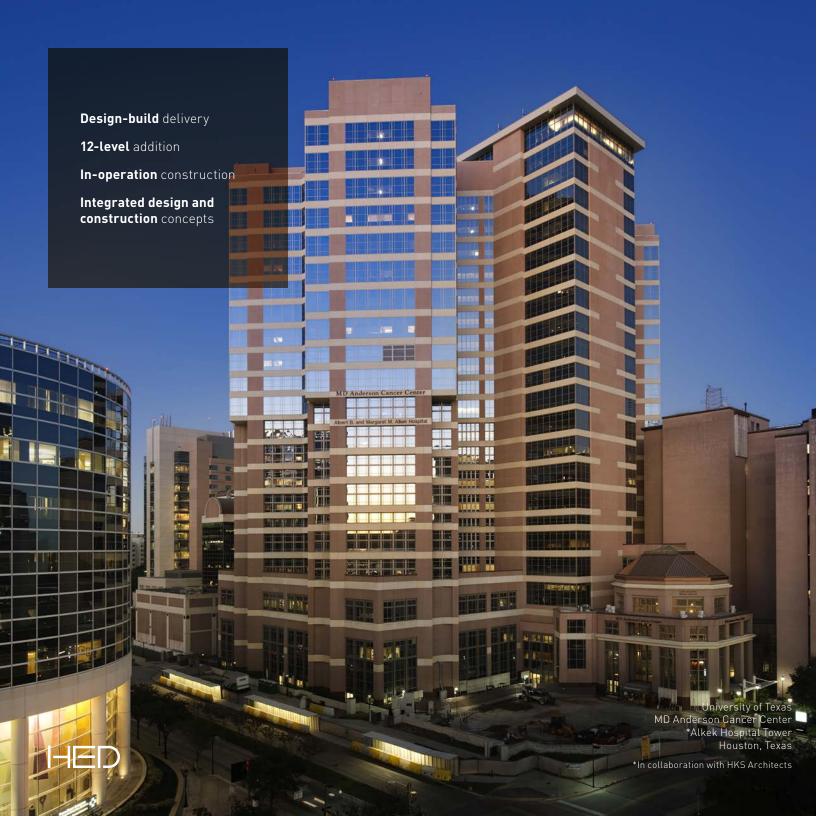

"I want you to know how much I appreciated the attention and professionalism that you gave to this modest, yet important project. Although we had to radically alter our process for contractor selection and adhere to an almost impossible schedule, you remained flexible and were instrumental in helping us meet all of the project goals."

John Wilson | Director of Planning, Design and Construction
 Parkland Hospital Health Services

A process that hones to a required minimum will create a safe environment. A process that reaches for the best in practice will create a quality environment. A robust process balances safety and quality for a truly healthy environment.

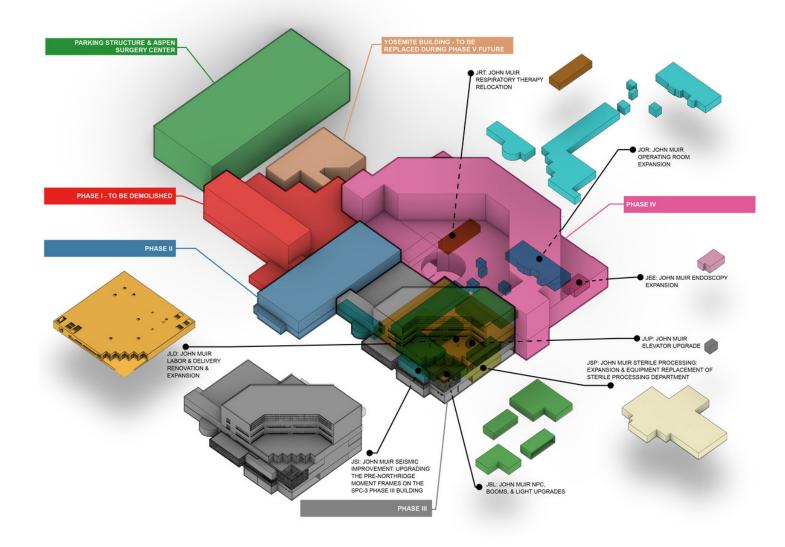

Interactive design process with mock ups, simulations and in-situ meetings

Comprehensive active hospital renewal

Seismic resiliency exceeds state requirements

Phased construction to maintain operations

"I'm continually inspired by our clients and colleagues—people who are not only at the top of their game, but who also make me a better person just by working with them. By the heroic medical professionals we support. By hearing from family and friends who have been impacted by our work. And by the opportunity to do it better, every time."

- David Jaeger AIA, LEED AP, EDAC
Principal Sector Leader | Michigan

"Thank you once again, HED. I appreciate the **effort, efficiency** and speed with which (the project) was delivered."

Tom Squance | Director of Capital Improvement Projects
 Stanford

A conscientious steward honors your means to continuously align the "three-legged stool" of cost, quality, and schedule.

Comprehensive active hospital renewal

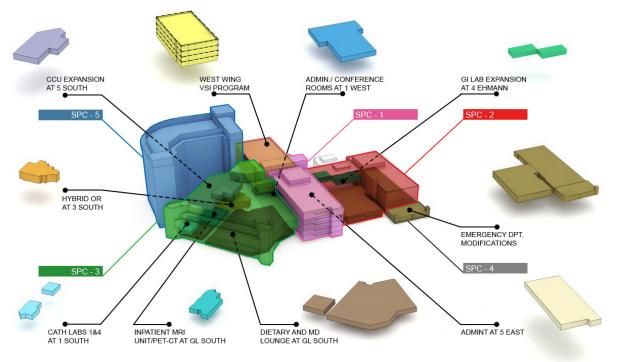

Phased construction to maintain operations

Included campus master plan

LEAN [IFOA] contracts

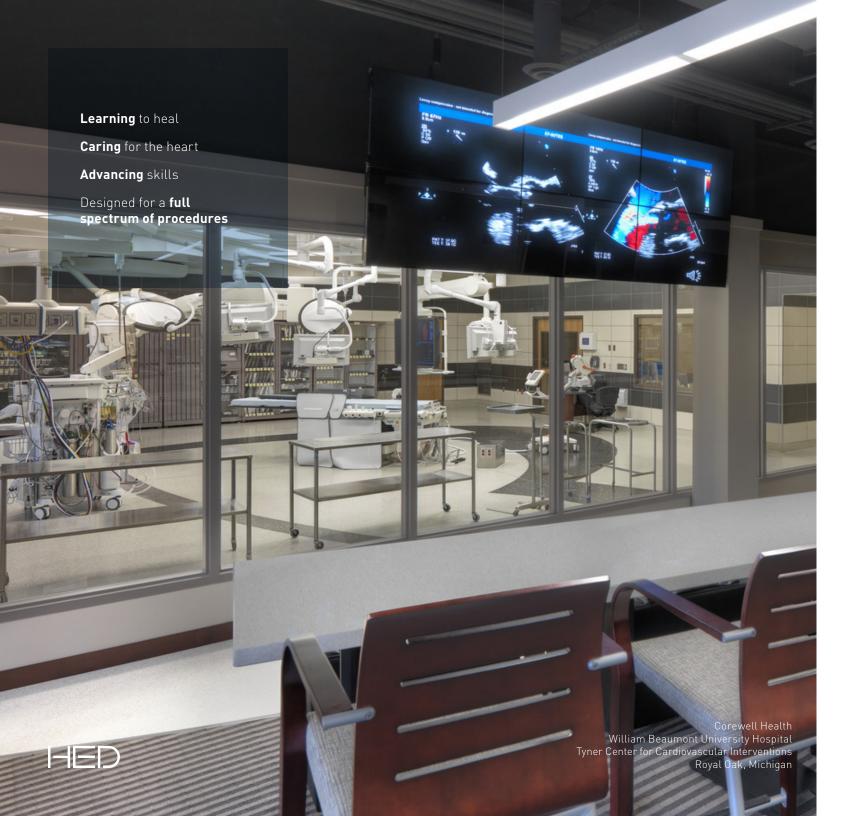

"The practice of healthcare architecture is a surprising blend of aesthetics, problem solving, and social engineering—and through this labyrinth a design is born, deep relationships are built, and the rewards are endless. The gift of every project is when we find that little something that wasn't asked for but will make the project that much better no matter how big or small—discovering this hidden seed contained in every project, and nurturing that gem for others to experience, is deeply fulfilling."

- Sharon Woodworth FAIA, LEED AP BD+C, EDAC, ACHA
Associate Principal Sector Leader I California

"I can say with confidence that I would recommend HED to any health system seeking first class design and engineering services based on my first hand knowledge on their performance for McLaren's new hospital construction."

Daniel Medrano | Corporate Vice President of Facilities Mgmt
 McLaren Health

We know what exists today, but understanding what could be for tomorrow requires an open mind. In our age of uncertainty, healthcare settings must be flexible, responsive, and reliable to future change. A forward-thinking mindset will position your facility for yet-to-be-known advances in healthcare.

"I believe that deep communication and collaboration results in more creative ideas resulting in better projects that successfully translate a client's vision into reality."

– Brett Paloutzian AIA, LEED GREEN ASSOCIATE, МВА Principal, Sector Leader | California

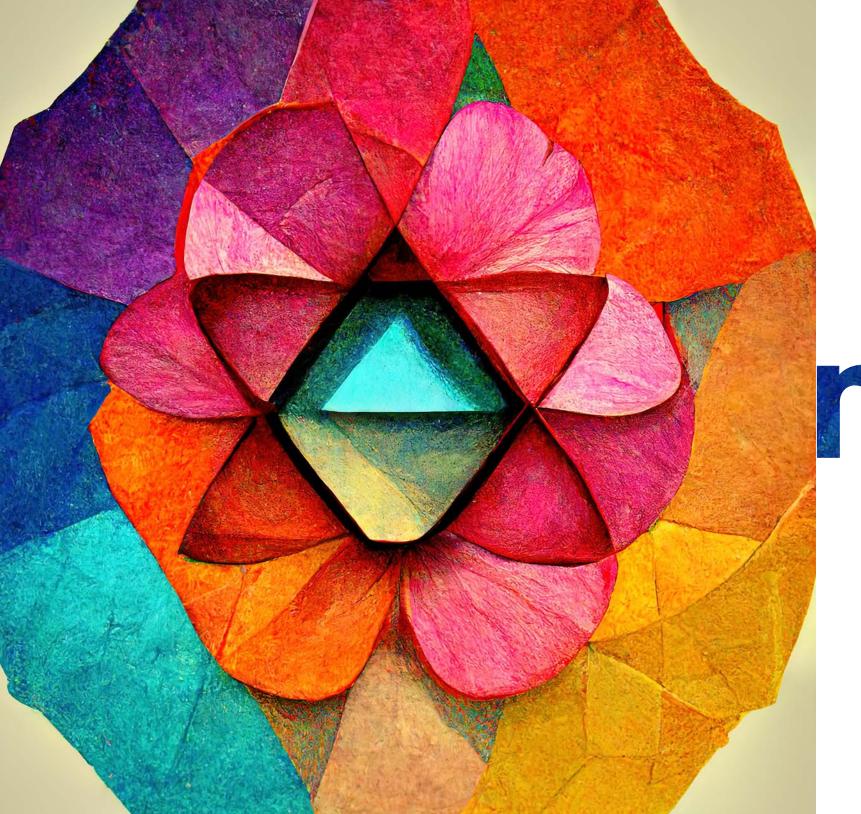

"HED is the best at planning complex renovation projects."

– Katy Merwin | Director of Construction
UCSF Medical Center

A return on investment for healthcare facilities relies on an efficient process underscored by lean operations capable of delivering health services over the long term.

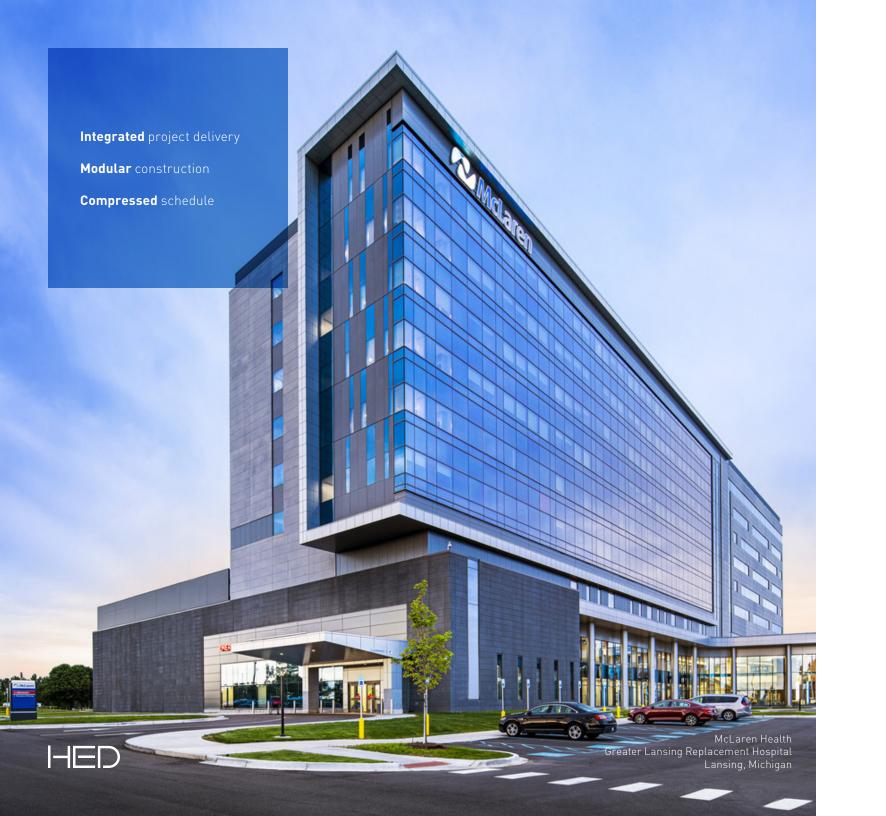

"Architecture impacts every aspect of our lives and, as such, can have a profound influence on our well-being. Realizing this motivates me to achieve design excellence, which is most rewarding when applied to creating healing environments. Healthcare Design requires keen attention to the synthesis and unity of numerous complex components, thus transforming vision, purpose, and raw material into a facility that promotes health."

- Jeff Simcik AIA
Principal, Sector Leader | Texas

"HED did a great job on the
Advocate Trinity ICU Remodel
project and overall I was
pleased with their performance.
The team was very responsive
and I would recommend them
for future work."

Terence Frigo | Project ManagerAdvocate Healthcare

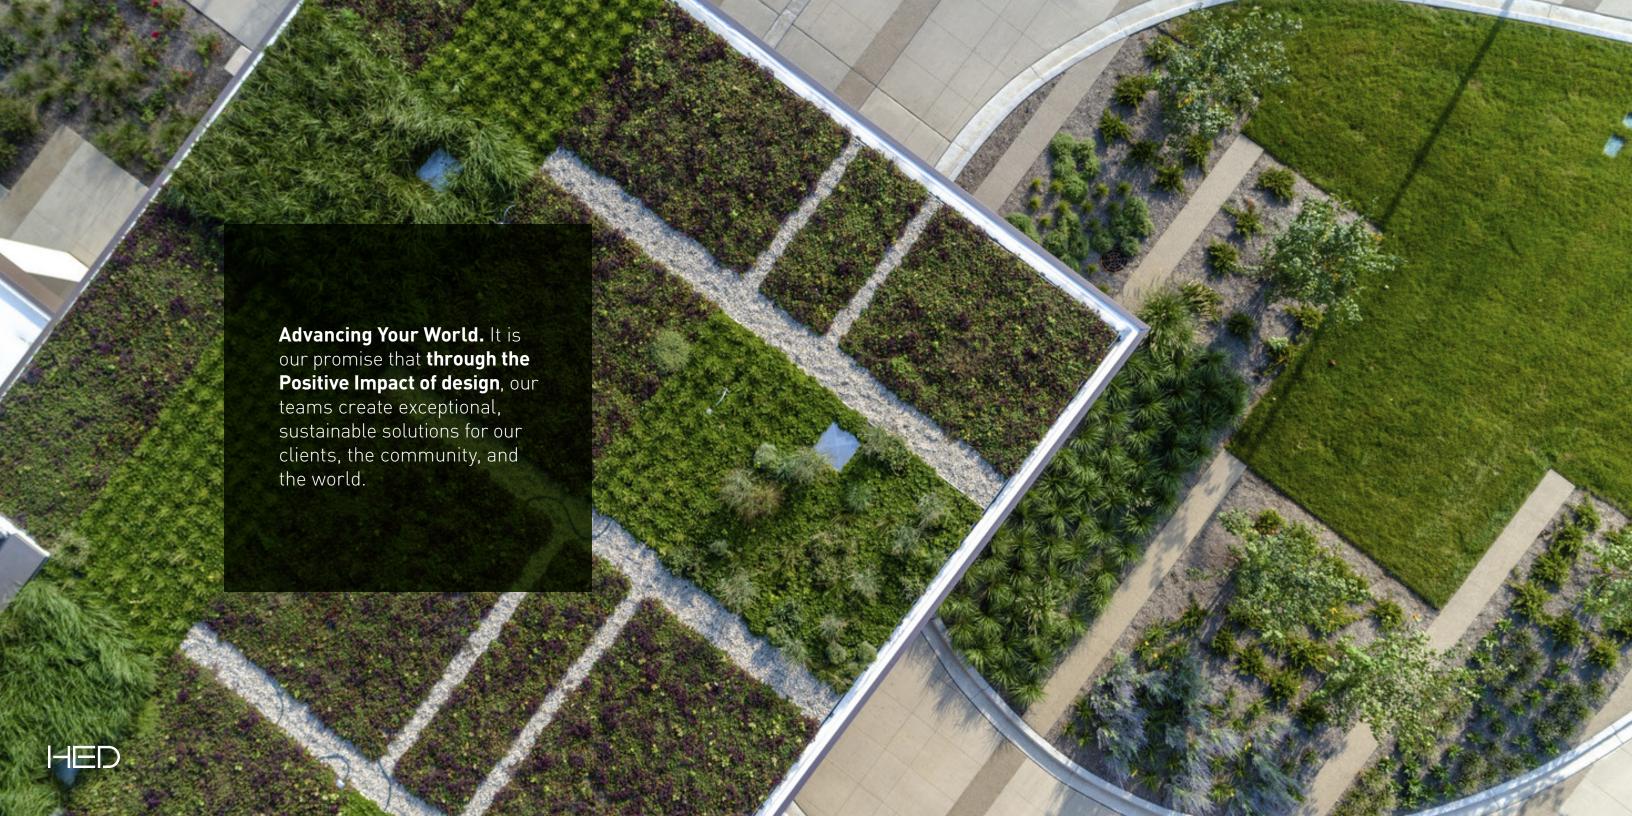

"Creating and working in an environment of collaboration, integration, and respect produces an opportunity to develop the most imaginative and responsive design solutions. We are trusted advisors working with our clients to solve problems and make the unknown known, that's the magic."

- Bruce Macpherson AIA, LEED AP
Principal. Sector Leader | California

"HED were **out-of-the-box thinkers**, coming up with a solution that saved close to a hundred million dollars more than the other A/E team."

Patrick Silvestri | Former CEOPrime Healthcare
